

ABSTRACT OF THE DISCLOSURE

A method, system and computer readable medium for information handling within an operating system, including providing a record retrieval program; providing an input device within a window or screen of the operating system and configured to enter an execute
5 command which initiates a record retrieval from local and remote information sources using the record retrieval program; using the record retrieval program to enter first information into search fields provided in the record retrieval program; entering the execute command using the input device after the step of entering the first information; searching, using the record
10 retrieval program, the local and remote information sources for second information associated with the first information; and displaying the second information in the record retrieval program, when one of the local and remote information sources includes second information associated with the first information.
